I think there are underlying problems that need to be addressed before they can be fixed. Things like confidence and motivation. You will never get anywhere if you don't have that drive in the first place, and I don't think one can acquire it without proper guidance from a professional. I learned that when I was in high school when I had issues with math. How to use this article for my future career? As one of my professors said "Math is beautiful" and once you realize that, you want to keep doing it. So I would suggest to anyone who wants to study math but is having trouble understanding, keep trying! If you can't grasp what the teacher is saying then get the textbook and try to do the exercises on your own or ask someone who knows something about math or go online and get some help. And just remember, math is your friend! :D

N/A - You are not allowed to see this document. It is one of the most difficult stages because students may be reluctant or afraid of asking for help or guidance or advice from their teachers or parents, or other students. This stage can be very frustrating for both teachers and students, so it is very important that student feel confident enough to approach their teacher's for help when they have any problem regarding homework assignments. <http://www.mathsisfun.com/fractions-calculator.html>

N/A - You are not allowed to see this document. Children are the future generation. They are our hope for tomorrow. We all are aware that mathematics can play a very important role in their immediate and future life. All the adults must take the responsibility to nurture mathematical culture in children starting from their early years of education. Therefore, all parents should encourage or motivate their children to learn mathematics in school in an interesting way in order to encourage them be more interested in knowing mathematics better. The teacher, therefore, must have wide knowledge regarding different methods of motivation so that she/he can apply the best methodology according to the situation. Teacher also has to possess good interpersonal skill so that he/she can motivate students easily by providing proper instructions or setting up appropriate environment for learning mathematics successfully.
