(2014).Q: How can I convert a string in
format DD/MM/YYYY to the UNIX
timestamp in PHP I have a string with
format DD/MM/YYYY that represents
the date. The string can have a year
before the day and month. Example:
21/06/2020 or 12/06/2020 or
10/01/2020. My problem is that I need
to convert this to a UNIX timestamp. I
tried the following: \$date =
'10/01/2020'; \$unixtimestamp =
strtotime(\$date); echo
\$unixtimestamp; But it returns nothing.

The result I expect should be

1296133800 A: try

`date_create_from_format($format, $date)` it does exactly what you want.

A: You have to use `explode` to get the day month year and put them in a

string. `$date = '10/01/2020'`; `$parts =`

`explode('/', $date)`; `$parts[2] =`

`explode('/', $parts[2])[0]`;

`$unixtimestamp = strtotime($parts[0].`

`$parts[1].$parts[2])`; `echo`

`$unixtimestamp`; 27/05/2017 Hello

again, After an awesome game on

Monday night with my mates, it was

time to pack up the board and see what

else I could find. Although I started the

game with the same piece as last time I

decided to open a new piece this time around. I had the nice four of spades from the previous game, but not the ace. I did have a two and the seven of hearts. What could I open? Turning over two fives and a four, I saw the jack of clubs. It was the most awkward five as I could only find two fives on the right side of the board, but that was only to my left so it would have been the most awkward one if I had played the ace. So a five from 2d92ce491b
