I've not installed the gem into my system yet. I want to install the gem to its own directory in my home directory, to keep things clean. I already have a ~/.gems directory to keep my gems in, and a ~/.rbenv directory to keep my ruby versions in. How do I install the gem into this location without messing up my existing ruby installations? This is what I've tried so far: gem install -n gem install --user A: gem install -n [HOME] More information in the gem install(1) man page. FILED NOT FOR PUBLICATION AUG 30 2013 3ef4e8ef8d
