How to recover Facebook password without confirmation reset code Remove any special characters from your current password . How to recover Facebook password without confirmation reset code Send a recovery email to your phone number Q: How to control the highlight the selectable elements from another element For example, I have two selectable elements, the first element contains five elements, the second element contains one element, when I select the first element, I want the second element highlight. Note: I need to set the color of the second element when I select the first element, not the default highlight effect when I click on the selected element. A: You can use the togglechange() event of the first element and the click() event of the second, then, depending on the change(), removeClass() the selected attribute from the second. $(".first").change(function() { $("#second").prop("selected", false); $("#second").removeClass("selected"); 2d92ce491b
