

Q: Trigger (core) datastore operation on update/create Can I programatically force or trigger an update operation on the core data datastore? Is this possible? Specifically, I'd like to force a (re-)index of a datastore entity (an entity of type NSManagedObject) whenever that entity is created or updated. If so, what's the best way to go about this? Can this be done with core data only? A: Core Data supports a lightweight in-memory data store, which means you could create an NSMutableArray with your entities and get the objects you want from there to be inserted into the datastore. Then you can simply insert it back into the in-memory array, and Core Data will do the rest. Here's an example of how it might be done:

```
id entity = [NSEntityDescription insertNewObjectForEntityForName:@"Entity"
inManagedObjectContext:[NSManagedObjectContext MR_contextForCurrentThread]]; //... [entity setValue:[[NSDate date]
timeIntervalSince1970] forKey:@"startTime"]; [entity setValue:[[NSDate date] timeIntervalSince1970] forKey:@"stopTime"];
[self.dtsEntityArray addObject:entity]; // When done: [self.dtsEntityArray removeAllObjects]; // Update the in-memory array with the store's
entities: NSArray *entities = [[NSManagedObjectContext MR_contextForCurrentThread]
rootSavingContext].persistentStoreCoordinator.persistentStores.firstObject.managedObjectContext.persistentObjects; for (NSManagedObject
*entity in entities) { [entity setValue:[[NSDate date] timeIntervalSince1970] forKey:@"startTime"]; [entity setValue:[[NSDate date]
timeIntervalSince1970] forKey:@"stopTime"]; } NSError *error; [[NSManagedObjectContext MR_contextForCurrentThread]
MR_saveOnly:YES withRootSavingContext:nil error:&error]; A
```
