Q: How do I change my HttpBasicCredentials from using UsernamePasswordCredentials to HTTPBasicCredentials? I am trying to test a Java web service using jUnit 4. I am using Apache's HttpClient library to call this service. I am struggling to get the credentials correct. I have used the UsernamePasswordCredentials and it works fine. UserCredentials creds = new UsernamePasswordCredentials("username", "password"); CredentialsProvider credsProvider = new BasicCredentialsProvider(); credsProvider.setCredentials(new AuthScope(host, port), creds); BasicHttpContext httpContext = new BasicHttpContext(); httpContext.setAttribute(ClientContext.AUTH_CONTEXT, credsProvider); try { HttpClient client = new HttpClient(httpContext); HttpPost request = new HttpPost(url); HttpResponse response = client.execute(request); } catch (Exception e) e.printStackTrace(); But my web service requires a different type of credentials. httpBasicCredentials is a method on HttpClient that I don't know how to use. A: I haven't used it, but I think you want to create an Authenticator object and pass it to your BasicHttpContext in order to send the authentication credentials to the server, and then use the Authenticator.setDefault() method to set the credentials for

Chapter 1. What is SEO (search engine optimization) and how it works In any business, no matter how small it may be, there are always people who are engaged in sales. Usually these are sellers: managers, marketers, brand managers. In the West, this is called sales force, we have sales managers. Their task is to provide the client with sales. There are many stages in sales. fffad4f19a
