In the following, the answer to (b) is wrong because the "problem" is taken in the absolute sense: a side of the cube has length $1/\sqrt3$. But why is the "problem" defined in the relative sense? What does "the cube side" represent? Why does "problem" then apply the absolute sense? A: It's because the phrase "cube side" means "a side of the cube". By contrast, the phrase "the volume of the cube" does not mean "the volume of the cube" but rather "the volume of the cube relative to $x=0$". You could use $x=1$ instead, but in that case you'd say "the length of the cube side" instead of "the cube side". Convex hulls are defined as sets of points that belong to the union of the convex hulls of the sub
