Amplification and expansion of a genomic island of lactic acid bacteria in the human gastrointestinal tract during the manufacture of a lactic beverage. A genomic island, MLGMGI-1, of lactic acid bacteria, most commonly associated with the genus *Lactobacillus*, was prevalent among clones of lactic acid bacteria from the human gastrointestinal tract. MLGMGI-1 was characterized by ~20-kbp tandemly organized homology regions of three open reading frames (ORF1-3) that are conserved in *Lactobacillus* and a number of non-*Lactobacillus* spp. This genomic island was present in *Lactobacillus gasseri*, *Lactobacillus brevis* and *Lactobacillus sanfranciscensis*, but not in other lactic acid bacteria, such as *Lactobacillus delbrueckii* ssp. *bulgaricus*, *Lactobacillus reuteri*, *Lactobacillus casei* s
