Sericulture yarn manufacturing products are most popular in North America, Western Europe, and South America. You can ensure product safety by selecting from certified suppliers, including 570 with ISO9001, 603 with ISO14001, and 1 with OHSAS18001 certification.Q: Scala: How to create an immutable map from a map? What is the best/cleanest way to do the following? In general I want to create a map that is always immutable, but I would like the map to also be a map (i.e. I want to add new elements to the map, but not overwrite existing elements in the map) A very simple example, using an immutable map as the input and a mutable one as the output: val input = Map(1 -> "element 1", 2 -> "element 2", 3 -> "element 3") val output = Map(1 -> "element 4", 2 -> "element 5", 3 -> "element 6") output = input.map{ case (x, y) => (x, y + " " + x)}.toMap The output of course needs to be Map(1 -> "element 4", 2 -> "element 5", 3 -> "element 6"), but as we can see, the map that we get after the map operation is not immutable any more, as the value of the second map is overwritten. A pure immutable approach would be val immutableMap = input.map{ case (x, y) 2d92ce491b
