The following languages and their supporting libraries and technologies are used with AutoCAD: ALGOL68 (AutoLISP) AutoLISP C AutoLISP C++ AutoLISP Java AutoLISP Visual Basic AutoLISP Visual Basic.NET AutoLISP Visual FoxPro C++Builder Delphi Microsoft Visual C++ Microsoft Visual Basic Microsoft Visual C# Microsoft Visual FoxPro ObjectARX VBA Visual Basic 6 VB.NET History AutoCAD was first released in 1987. The first version was written by Mike Rodell, and was called BatchPLT. Mike Rodell wanted to make a program that combined the features of 3DStudio and AutoCAD but without its price tag. He released BatchPLT in 1985 and sold it for $59.95. BatchPLT allowed the user to place objects on the drawing canvas and edit properties of those objects. The program allowed the user to print out the layers of a drawing as a way to enhance AutoCAD's effectiveness. He ported BatchPLT to Windows NT and renamed it Autodesk PLT (AutoCAD Personal LISP Toolkit). In 1994, after the release of AutoCAD 1.0, Autodesk created ObjectARX. ObjectARX is Autodesk's new class library for C++ development. In 2000, ObjectARX was renamed to AutoCAD Class Library (ACL). AutoCAD Class Library (ACL) was the base for: AutoCAD Architecture AutoCAD Electrical AutoCAD Civil 3D In 2003, Autodesk released AutoCAD 2007 which was renamed AutoCAD 2012 in 2012. The code is in this file: mhh3d mhh_objects\ and there are few new files in mhh_objects folder like mhcoder_1.dll, mhcoder_1.ini, mhproj_2.dll and mhproj_2.ini. This version also does not work on 2013, use the earlier (2012) version. There are a few things to do: 1. Import "autocad" files. The autocad files are in "mhh_objects\mh" folder. If not all of these files are there, try creating the folder "mhh_objects" and import the files there. 2. Convert the "mhh" file to "mhh_objects" to install it into where "autocad" needs to look for it. Run the convert_mhh_to_mhh_objects.bat file in the main "mhh" folder. Remember to set the environment variable as before. 3. Import the autocad files. Create the "mhcoder" folder if needed. mhcoder_1.dll, mhcoder_1.ini and mhproj_2.dll is in this folder. If the autocad files are not found, create the folder mhcoder and import them in there. Remember to set the environment variable as before. 4. Import "mhproj" file. 5. Do the last step again. From here on, it should be a piece of cake. Here is the "mhh" file, for 2000 and 2002 with code that runs the file. Note that the two files are different from what is on the download-page (for the word file).
