GabScreenshot Free [Win/Mac]

Description: GabScreenshot, a simple, yet customizable tool for Windows to take screenshots. Based on the.NET Framework. Easy to use and small memory usage, it's ideal for system monitoring and security audit. Features: • Save screenshots to specific locations. • A large selection of useful options to set. • Better colors in the full screen mode. • A popup with keyboard shortcuts on screen capture. • Automatic capture of active window. • Preview of screen captures in the tray icon's right-click menu. • A progress bar to indicate the capture status. • Supports more file extensions. The project was initiated as a team of two people, but turned into a fully-fledged joint effort with the intention of developing a useful and user-friendly tool for Windows. Thanks to the active support of our users, we're able to keep the project alive and growing. More than 100% of our software updates are accepted with contributions from the community, and the general feedback is very valuable for us. GabScreenshot was tested on Windows 7, 8, 8.1, and 10, as well as on Windows Server 2012 and 2008, with no particular issues found. In case you find any bugs or have suggestions for further improvements, please report them here and help us to make GabScreenshot a better tool. And if you feel like it, you can support the project by buying the official license. GabScreenshot Screenshots Version: 1.0 Screenshot is a feather-light application that gives you the possibility to capture the screen in different modes and automatically save images to file with various extensions. It features an intuitive set of options that can be approached even by inexperienced users. Systray integration and hotkey support Once launched, it gets integrated into the taskbar notifications area and shows a balloon message with the keyboard shortcuts assigned for grabbing the screen: Ctrl + PrintScreen for full screen, Alt + PrintScreen for active window, and Shift + PrintScreen for custom region. Configure snapshot settings By opening the tray icon's right-click menu, you can access the preferences panel to choose the preferred image format (PNG, JPEG, GIF, BMP, ICO, TIFF, WMF, EMF), destination folder, filename prefix, and numeric padding length. Moreover, you can preview the filenames, adjust the opacity level during the region capture, hide the tooltip with the keyboard shortcuts on startup, as well

What's New in the GabScreenshot?
