It features the latest news, a new filter, and more. In this version, we have introduced a new filter based on our latest technology. A filter based on algorithms that were recently developed by Stanford University, known as DeepDetect. The technology uses deep learning to detect faces in an image, and takes into account their age, gender, and emotion. Other new features and improvements include:

- Enhancements to favorites and a new View Deals tab.
- A shiny new design.
- A new search feature.
- New icons, a new icon art direction, and more.
- A new language on languages.
- And much more!

Apatetix is a service that allows users to start their own photo studio. You can search by genre and by location, and then upload a photo that is compatible with your chosen genre. Based on the genre of the photo, the app will detect faces in the image and give you the best results. If there are no faces, the app will allow you to edit the photo and adjust its aspect ratio, and then choose the best results and send the newly edited images to your business. The app will also help you decide which photo you would like to promote first, and you can also view the best-performing images as a whole. With Apatetix you can also make money while you learn to develop your own app. You can charge a small fee each time users save the edited images they receive from you. The quality of the images you upload does not matter since we won't contact the users. You can also select which of your photos to include in the featured screen. You can increase the number of Featured Apps you want to promote and get paid for each user who becomes a potential client. You can also use the same system to promote your personal photos and share the editing on your own social media accounts
