In particular, the present invention relates to a technique which is effectively applicable to the technique of fabricating a semiconductor integrated circuit device including a semiconductor chip that is mounted on a wiring board. In an electric device such as a semiconductor integrated circuit device, a semiconductor chip that is electrically connected to a wiring board on which an electric circuit is formed is mounted by using a method of connecting a peripheral terminal of the semiconductor chip to a wiring pattern that is provided on the wiring board. Conventionally, the wiring pattern is formed in advance on the wiring board and the semiconductor chip is directly connected to the wiring pattern. Moreover, Japanese Unexamined Patent Publication No. 2005-088400 (Patent Literature 1) discloses an assembly in which, after a wiring pattern is formed on an insulation film provided on the wiring board, a semiconductor chip is bonded to the wiring board on which the wiring pattern is formed, and the wiring pattern and the semiconductor chip are connected to each other by using a bump electrode provided on the semiconductor chip.In our latest blog post we introduced you to the content block and explained how we can put different content on our website: Using the Content Block.
