Version 0.8.6 ; Infiltrator Network Security Scanner is a powerful network scanner and information stealer. It can monitor, discover, extract, audit, and report information from a target computer or network for security, penetration testing or research purposes. Features: *

- * Powerful network scanner to quickly audit your network computers for possible vulnerabilities, exploits, and information enumerations.
- * Built-in database of known vulnerabilities, that can be updated online and allows

you to select the items to scan for or to add custom entries to be included.

- * Enables you to perform a variety of discovery, audit, and extraction actions, like discovering installed software, shares, users, drives, hotfixes, NetBios and SNMP information, open ports, mail server information, or registry details. *
- Detects the presence of the following default services and policies: HTTP server (port 80), and CGI server (port 80) (optional), Windows service named "System", disabled domain security policies, and enabled domain policies. *
- Over 250

commands in a commandline interface for executing discovery and auditing functions. * External scripts for running scheduled scans. * Real-time GUI alerts: Real-time alerts can be sent to your email via the Received mail options button and a new alert window will open with the currently detected items and their details. * Auto-detects default ports. * Displays a number of information about the currently running scan, including the OS of the target computer. * Ability to export the state of each found item to a.csv file. * Ability to export each found item as a JPG image. * Ability

to export each found item into a Text file, used to programmatically create a.txt report. * Ability to export each item into a JPG image. * Ability to export each item into a CSV file. * Can import and export remote files. * Checks the Internet connection for a specified interval of time. * The size of the local folder or the remote folder should be used to determine whether a remote file should be listed or not. * Ability to use integrated proxy service, such as HTTP proxy, SOCKS proxy, and direct connection. * Ability to integrate with MSI Virtual CD Virtual images. * Ability

to perform TFTP and SFTP
downloads. * Create and run Virtual
CD images. * The ability to allow the
current scan to run as a scheduled
scan.
