Select File -> Save as Provide a name for the file, for example, "SAMPLE-MESH-MIG.dwg" Enter the location where you want to save the file, for example, "C:\.NET\test2" Click "Save". Save As: Enter name for the file (ex:Mashmallow.dwg) Save to: Type the location you want to save the file (ex:C:\.NET) Save Use Autocad and: Open a new file (from Menu File -> New), and type the name of the file (ex:Mashmallow.dwg) This is how the solution is done, I don't know which program you are using. I would suggest you to install Autocad and open the file in there and follow the step by step procedure as I have explained and it should work. If this does not work I would suggest you to reset your security settings. Traditionally, a number of different methods have been employed for the introduction of changes to a document by the processing of the document in a printing operation. Such methods include manual use of a pencil or pen to mark up, i.e. hand-written additions and corrections, on the document. However, the volume of such documents that can be hand-marked to a reasonably high quality is relatively small and therefore is a relatively inefficient use of personnel and equipment resources, especially when these documents are run through a high-speed production line. Printing-marking systems are also available which, as the name suggests, employ a marking device which is used to mark up a document that is being printed. The marking device typically employs a marking media that is placed against a paper stock with the marking device being moved across the paper stock to mark a visible change on the paper stock. For example, the marking device may include a marking wheel or pen which is rolled over the paper stock to mark the paper stock in a manner to show the desired change. A marking device that can be placed directly against a paper stock to mark the paper stock in a manner which is acceptable to a user is disclosed in U.S. Pat. No. 5,063,999 to Welsh et al. The patent discloses a printing apparatus that includes a marking wheel placed in contact with a sheet of paper stock to mark the paper stock. The marking wheel is rotatable
