Autodesk Forge Autodesk Forge is Autodesk's cloud-based platform for application development. It is a software development platform that enables organizations to create, develop, deliver, manage and monetize customer applications, accessible from any device with an internet connection. According to Autodesk, Forge lets developers "develop, test, and distribute applications faster and more efficiently than ever before." Autodesk Forge is built on four key components: Forge Host – The application hosting environment of the Forge cloud platform Forge – Provides access to APIs, connectors, other services and services for Application development Forge Host: The Forge Host contains the resources, applications and services required to execute, test and develop applications. Forge Host can be hosted locally or in the cloud. Forge Host application files are supported by multiple device platforms, including PC, Mac, iOS and Android. Forge APIs provide developers with the services to access and interact with applications hosted on Forge. Forge SDKs (Software Development Kits) can be used for building applications using APIs. They allow the developer to access all supported Forge services on a single platform. Forge APIs are available for three different target platforms: PC, Mac and Android. Forge is an open, secure cloud platform. There is no charge for customers to use Forge. Autodesk customers use Forge APIs for application development, which allows them to create applications and extend applications hosted on Forge. Autodesk Forge is based on Autodesk's Software Development Kit (SDK) platform that has been used to create a wide range of products from Autodesk's BIM 360 cloud-based product suite to Autodesk's powerful 3D design and engineering software. Autodesk Forge allows developers to use a common API set, so their applications can be published, hosted, managed and monetized on Forge. As an open cloud-based platform, Forge supports the development of applications by any developer. Forge's use of the cloud saves time and reduces costs. Forge makes it easier for developers to build and deliver applications, as well as to test them for quality and performance. Autodesk Forge is based on components of Autodesk's Software Development Kit (SDK) platform. This includes the ability to access APIs that allow developers to create applications for any platform, based on a common set of APIs. Accounts are the lifeblood of our clubs and there are many things we need to consider before we can make any decisions regarding the future of our accounts. The first and most important point is that we need to have a more rigorous approach to our club accounts. We should be able to demonstrate, not just estimate, how the club is actually performing.
