So you have an Apple or Android device and you're new to graphic design? If the answer is yes, the first thing you need to learn is, how to use a tablet computer as a graphic design software. Use this guide to create an attractive, realistic vector background for your photos, with the help of a tablet and graphics design app. The best thing

about this app is that the photos that you use for your background will not be taken and will be replaced with your own photos. What should you expect? You can use this app to resize your photos or create original images from scratch. The app is mainly aimed at those who want to create a picture, so you can also change the color and size of

your photo. The good thing about this app is that it makes it easy to make a well-formed image and makes it easy to edit it when you're done. Designer: all photos Pros: It is easy to use and it has a very different workflow compared to most graphic design apps for tablets. Cons: You must be an expert in creating vector images. The app is

not as convenient and enjoyable to use as other apps. Platform: Windows 8.1, Windows 10 and Mac How to use the vector app In this app, you will be able to edit photographs in any resolution. Brush panel below the Tools and Options bar**. Use the Brush panel to change the settings of the Brush tool (see Figure 10-4). As you make changes, the Brush icon on the Tools and Options bar updates to reflect your new settings. The Brush panel includes several options for controlling the color, size, and shape of the brush

stroke you create. These settings are described in the next section. For now, use the options in the following list. There are other settings available, but these are the most useful for most Photoshop users: * **Type**. Select the type of brush you want from the menu. * **Angle**. This option controls how fast the brush gets wider. The

default of 3, which means the brush is 3 pixels wide at the start of the stroke, but gets gradually wider as you make your stroke. Experiment with the value to see how much effect you can get out of different brush widths. * **Hold**. Using the slider, set this control to determine how long to hold the mouse button down when you click to paint. The

longer you hold the button, the farther you'll be able to walk the edge of the brush before it bends into a point. Try moving this slider up to about 2.5 to get good straight lines. (These settings are the same as the options for the Type tool, described on Adjusting Your Brush. Unless you want your brushes to be the same as
