I am wondering why there are differences between horizontal and vertical text? Some text render better with vertical text like Other text seem to work better with horizontal text: I know this is a stupid question, but it doesn't seem to me that it is a UI/UX problem, just a rendering problem. Any ideas? A: When you try to draw a glyph that is oriented with the boundaries of the (horizontal or vertical) coordinate system, it will usually do better if it is oriented with the boundaries of the (horizontal or vertical) coordinate system. This can be observed in the following diagrams: Rotation is usually depicted as a clockwise rotation, but it can also be a counter-clockwise rotation: And text is rotated with the text matrix so that the angle (rotation) is with respect to the current transform matrix. The current transform matrix is in most cases the identity matrix (zero rotation). And then there is the concept of the text matrix (text position):
