Traditionally, CAD design has been done with pen and paper, but over the past three decades, the art of CAD has evolved from being paper-based to using computers for design, drafting and 3D modeling. The concept of CAD is to develop a design by working out a representation of the physical, three-dimensional nature of the object rather than simply to draw the object. CAD is primarily used for creating computer-aided designs, such as architectural blueprints, mechanical drawings, vehicle body layouts, and interior and exterior site plans. Because the design process for CAD includes translation from paper-based to computer-based tools, CAD is sometimes considered to be a form of computer-aided drafting (CAD/CAM). AutoCAD includes an integrated suite of solid modeling and rendering tools, which are used to create 3D computer models of designs, and animate and render these models to create animations and movies. The included tools are linked to various geometric features and computer objects, such as points, surfaces, lines, curves, arcs, and splines, to allow for the construction and manipulation of these geometric features. The interface, or user interface, of the software is based on a series of commands in the form of a mouse-driven menu. AutoCAD's most commonly used features include the ability to draw with digital pens, import data from different types of files, render images from a 3D model, manipulate and annotate various design elements, import and render 2D and 3D images, and cut, copy, and paste features. The software is also highly customizable. History [edit] AutoCAD is a "modern" system in which the computer plays the central role in creating, editing, and sharing data. Early CAD systems were basically paper-based, with the CAD operator using one or more drawing pads to create designs. In the 1960s, CAD systems began to move to large mainframe computers. The availability of larger computers made it possible to use CAD programs on desktop computers, but it was more difficult for CAD operators to move from the existing technology. The first CAD operator program, Galen's Sketchpad, was written on a PDP-11 in about 1968. In the early 1970s, students working on a team at Oak Ridge National Laboratory wrote the first commercial CAD software. This system, called the Oak Ridge Engineering Design System (OREDS), was released to engineers in 1972. In

Visual LISP (VLISP) is a programming language for AutoCAD. It is similar to HyperCard and the well-known Macintosh programming language, AppleScript, although it uses a more limited object-oriented programming model. AutoCAD's VLISP programming language is an extension to the Visual LISP programming language. Application bundles AutoCAD can be bundled with other AutoCAD applications and/or share data files with other AutoCAD applications. AutoCAD customizations AutoCAD.NET is a programming interface for AutoCAD.NET that allows VB.NET developers to use AutoCAD scripting techniques to create custom applications for AutoCAD. AutoCAD.NET is part of AutoCAD's first generation of web-based technology. The development environment is a hybrid.NET-based web application that runs in a thin client-side browser on the user's computer. AutoCAD Conductor is an API that allows users to integrate Excel, Word, and PowerPoint with AutoCAD. Visual LISP is a programming language for AutoCAD. Q: if $f(x)=\sum_{n=1}^{\infty} a_nx^n$ and $g(x)=\sum_{n=1}^{\infty} \frac{1}{n}x^n$ then which of the following are true? If $f(x)=\sum_{n=1}^{\infty} a_nx^n$ and $g(x)=\sum_{n=1}^{\infty} \frac{1}{n}x^n$ then (a) If $f(x)$ is unbounded then $g(x)$ is bounded (b) If $f(x)$ is bounded then $g(x)$ is unbounded (c) Both $f(x)$ and $g(x)$ are bounded (d) Both $f(x)$ and $g(x)$ are unbounded My attempt: I proved $f(x)$ is unbounded. Now, if $g(x)$ is bounded then $g(x)=\sum_{n=1}^{\infty} k a_nx^n$ for some $k\geq 1$ and some a_n then $g(x)=\sum_{n=1}^{\infty} k \frac{1}{n}x^n$ is unbounded which is a contradiction I can't solve it for (d). Any suggestion? A: b is true by definition of the derivative. $f(x)$ is unbounded if a_n is unbounded for any n , and $\frac{1}{n}$ is unbounded iff n is unbounded. d) is true because $\sum_{n=1}^{\infty} \frac{1}{n}a_nx^n=\sum_{n=1}^{\infty} \frac{1}{N}a_nx^n+\sum_{n=N+1}^{\infty} \frac{1}{n}a_nx^n=f(x)+g(x),\quad N\in\mathbb{N}$. For the sum in c), $f(x)$ is bounded, $g(x)$ is unbounded, so $f(x)+g(x)$ is unbounded. Permeability of

Import feedback from paper or PDFs without additional drawing steps Extend your design. Easily add, remove, and replace sections, paths, and text and easily extend your design and redraw or export it. (video: 1:53 min.) Add style feedback. Add feedback to your drawings to let users know what design style they are using. Different styles are represented with different colors. Adjust the appearance of your existing style. Easily adjust the appearance of your existing style. (video: 1:26 min.) Use with AutoCAD 360 Create and manage projects with Autodesk 360 Apps. Create, work with, and review drawings with other AutoCAD and AutoCAD LT users and manage projects together online and across devices. Create 360 documents that automatically synchronize and scale across multiple devices and platforms, allowing you to work together and collaborate online in a secure workspace. Import and export to and from the browser-based 360 apps and share drawings via the cloud. Autodesk 360 Apps: Create and work with drawings: Create and work with interactive drawings from the browser. Share drawings with team members: Share in-progress drawings with team members or across multiple devices. Work together online: Collaborate online through text chat, audio, and video. Share documents: Share design documents and artifacts like presentation and infographics with team members or other designers. View, organize, and manage projects: View, organize, and manage projects online. Work across multiple devices: Share and sync work across desktop, mobile, and web applications. Collaborate with others: Work with people all over the world. (video: 9:27 min.) Synchronize and scale drawings: Allow the content and style of shared drawings to automatically synchronize and scale across multiple devices. (video: 2:53 min.) Create in-progress and completed documents: Create interactive drawings from any of the 360 apps or from external applications. (video: 2:52 min.) Import and export from 360 apps: Import and export drawings to and from the browser. (video: 3:41 min.) Adjust the appearance of styles: Easily adjust the appearance of existing styles.
