Bitcoin was first introduced as a decentralized currency without the need for a central bank or any intermediaries. It can be sent to and from users via the Bitcoin network, a peer-to-peer network in which transactions are authenticated by nodes and recorded on a blockchain. The inventor of Bitcoin remains a bit of a mystery. A paper titled Bitcoin: A Peer-to-Peer Electronic Cash System was posted on Oct. 31, 2008 to a cryptography mailing list with "Satoshi Nakamoto" as the author. However, Nakamoto has never revealed any personal information about himself and his identity has never been confirmed. This has led many to believe the name is a pseudonym for one or more creators. In 2009, Bitcoin was first used after it was released as open-source software, when Nakamoto mined the starting block of the blockchain. This is referred to as the Genesis Block, and it contained the first 50 Bitcoins ever created. From there on, Bitcoin continued to be mined by other early contributors until 2010. That's when programmer Laszlo Hanyecz made the first known commercial transaction using the cryptocurrency through the purchase of two Papa John's pizzas for 10,000 Bitcoins. (Fun fact: That amount of Bitcoin is worth over $300 million as of this writing). Since then, Bitcoin has been traded hundreds of millions of times, with the earliest major transactions occurring in black markets. The largest of these was Silk Road, which traded nearly 10 million Bitcoins during its existence. Because of black market use of cryptocurrency, regulation emerged from several countries. The People's Bank of China initiated the most impactful regulations with three separate actions: - In December of 2013, the bank prohibited financial institutions from using Bitcoin. - In September of 2017, it issued a complete ban on the use of Bitcoin - In June of 2021, it implemented a crackdown on major cryptocurrency miners. After each of these instances, the price of Bitcoin halved. In spite of these regulations, however, the price of Bitcoin is still supported and trending upward thanks to institutions and countries allowing the use of cryptocurrency. The two most recent examples can be found through the Tala, Circle, and Stellar Development Foundations' partnership with Visa, as well as El Salvador's legislation to make Bitcoin legal tender. News on Bitcoin and other cryptocurrencies evolves on a daily basis. In fact, El Salvador's update on legal use of Bitcoin occurred a681f4349e

The EPSET (The PSET is a shortened version of the EAI's Psychological Status Evaluation Scale. The PSET is the main battery of tests used to assess a subject's psychological condition, including the user's current and past conditions).The EAI counts that out of a population of over 50,000, only something like 30,000 finished the PSET on one day. In the bigger picture however, it is important to know how accurate this study is. Now this isn't entirely accurate but it is something to consider. Things like PTSD can cause users to try and fake test results because the tests are so difficult to deal with. I think this may help some people out there who are wondering what the EAI's PSET is all about. Contents 1.1 What is the PSET? The EPSET is a very simple and easy to use test that is used to assess whether a subject is suffering from any of the following; PTSD, Anxiety or Depression. 1.2 How to use the test? To use the test you should begin by reading the instructions. They are located in a pdf document that is easily accessible from the site if you have been to the forums to download it. 1.3 What is the best PSET Score out of 40? There is no best score out of 40. The best score is the score that is most important to you. It depends on who the test is for and what their purpose is. If it is for a psychological evaluation then it is best to go for as high a score as you can get. If it is for the best recognition then you should go for the highest score possible. 2.1 Reference 2.2 Is there any information about the author of the test? I don't know. 3.1 Video A video of the test can be found in the Bugs and issues section. 4.1 What is the Website? If you are planning on buying the test then you should click on the website button on the right. This will take you to the website. The website is an independent website that is completely unrelated to EAI. 4.2 What has the team been up to? The team has been very busy but a lot of that has been with EAI. 4.3 What is
