Q: Embedded cassandra - only one node can access to a storage I am using embedded

cassandra with the following configuration (that works fine for me): storage_port: 9000 in_memory_consistency: all However, if I have only one server, I can't change the configuration without I stop the service. Is there any solution?

A: If you only have one node running, then it is not possible to use any of the caching options (memtable_flush_writers,

stale_writes_ttl, etc) because the node would not be able to write anything to disk. If you are using a dedicated node for the storage, I would suggest adding another node to your cluster so you can switch to a caching write policy.
