Hexamail Guard

77a5ca646e

Hexamail Guard integrates into your Exchange Server all required features for protection against spam and viruses. With Hexamail Guard, you can easily block e-mail addresses and domains, so you can minimize the risk of spam, abuse, and viruses. You can also manage the SMTP servers from where e-mail will be sent from your organisation. Hexamail Guard uses a unique technology called "Smarter Filter Engine" to identify new threats and discard them before they even get to your e-mail servers. Hexamail Guard is the only application that provides multi-layer filtering for e-mail and ensures immediate block if e-mail addresses are found to be non-compliant to SMTP Guidelines. This application is very easy to use. Once it is installed and configured it will automatically block spam and viruses, and will notify you if it finds non-compliant messages. Hexamail Guard is compatible with all versions of Microsoft Windows. Unique Features: * The unique Smarter Filter Engine enables Hexamail Guard to detect spam and viruses in real time. * Hexamail Guard is compatible with most mail servers. * It uses a hybrid filter engine that combines the power of both real-time and signature-based analysis. * The powerful virus scanning engine in Hexamail Guard identifies viruses by their distinctive signature and is able to block viruses quickly. * Hexamail Guard will notify you of potential spam and viruses. * Hexamail Guard does not need to be installed and configured on all mail servers. * Hexamail Guard is compatible with almost all Windows clients. * HEXAMALG is multilingual. * Hexamail Guard features a multilayer behavior that addresses different spam levels and the target audience. * Hexamail Guard can be configured to block outbound e-mail and inbound e-mail from particular addresses, domain names, and local e-mail addresses. * You can also define multiple rules. * Rules can be based on e-mail contents (message headers, message bodies, from addresses, subject lines, etc.), recipient addresses (both senders and receivers), or from/subject lines/bodies. * Additionally, filters for viruses, spam, jpg/jpeg, gif/jpg/png and other file types can be defined. * Set rules with your own defined e-mail address, e-mail sender, e-mail subject lines, or e-mail text content. * Get notified if a detected message is classified as spam or virus. * Get notified if a detected message is compliant or non-compliant to an anti-spam or anti-virus rule. * Get notified if a detected message violates an anti-spam or anti-virus rule. * Get notified if a detected message violates a specific rule. *
