PrimoPDF Free [March-2022]

PrimoPDF is a tool that has been especially developed by a French company called Mobilis to automatically produce PDFs of the documents that you are viewing in your web browser. If you are a web designer or user of other web pages that contain images, PrimoPDF is the solution for you. You can simply open any web page in your browser (like Internet Explorer, Opera or Chrome) and, when you have finished exploring it, you just have to click one of the three options from the bottom of the screen. The application then automatically handles all the image content. In a matter of seconds, you will then have a PDF document of that web page ready to be saved to your hard drive. You can then send this file by email and open it on your computer. No need for installations or expensive software. An even easier way to convert web pages to PDF is to simply hit the Print button in your browser. Unfortunately, this feature is not yet available on most browsers, but it is already available on some Internet Explorer versions. In order to use this feature, you will need to download the software and set up it as a printer in your browser. You will even be able to use the following print styles: • Grayscale • B/W • Normal • Transparency • Custom If you are not a web designer, you will find that PrimoPDF is also able to convert images from different software to PDF format. This function works perfectly well in the context of any CAD or graphics software. The application allows you to control many of the general options that affect the conversion, such as the page margins, the margins in the document, the saving location, the aspect ratio, the width of the images, their quality and their size. This is all done through a simple and intuitive GUI. Once the conversion has been finished, you will have a PDF file that can be uploaded to sites such as Squidoo, or to your own web server and viewed with your favorite web browser. The advantage of using a dedicated conversion tool is that it will work for all types of documents and data, which is not the case with many PDF files created with Java or OpenOffice. Another advantage of using a dedicated application is that you will be able to easily export the data into other formats, such as Microsoft Word, Excel, and PowerPoint, as well as HTML, EPUB, DjVu, TIFF and RTF, depending on the version

PrimoPDF [32|64bit]

Converts any printable document to a PDF file.# Prints a PDF file with the pressed Print button.# Eases the conversion of text documents, webpages or images to PDF format with only a few clicks.# Imports text documents, images and websites into PDF format. # PDF documents are instantly accessible on all Windows-compatible devices.# Create a PDF file from any printable document.# This application comes as a stand-alone program.# Start using this tool today! # Features: # Convert any text document, website, image or PDF file to a PDF document.# Print any text document, website, image or PDF file from your desktop to a PDF file.# Add a signature to your PDF documents.# Print documents in landscape or portrait mode.# Set the color, opacity, and position of the background and text.# Highlight selected text in a PDF document.# Import web pages, images and URLs into a PDF document.# Add watermarks and tracking dots to your PDF documents.# Save PDF documents as standalone files.# Import PDF documents from SD card or USB drive.# Password protect your PDF files.# Import PDF documents from a file.# Process a printable document without saving a
