Since then, AutoCAD has evolved into a suite of related software and is one of the most commonly used CAD and drafting applications available. Although originally developed for the desktop, AutoCAD is also the software of choice for many architects and designers, as well as engineers, contractors, manufacturers, and students. Despite the rise in popularity of AutoCAD and its siblings, versions of AutoCAD have historically been a source of headaches for CAD users. The software releases were often too old for the hardware systems they were being used on, or the hardware had reached the end of its support cycle. Today, modern CAD users rely on AutoCAD 2015 and later, or other CAD or drafting applications. In this article, we're going to run through some of the most common problems you might encounter when using AutoCAD, and how to deal with them. We'll start with an introduction to AutoCAD and what it is and what it is capable of. AutoCAD is one of the most popular CAD and drafting applications. It is used by architects and designers, engineers, students, and those in the construction industry. AutoCAD is developed by Autodesk, the world's largest provider of 3D design software. What is AutoCAD? A commercial computer-aided design (CAD) application, AutoCAD is the de facto standard in the desktop CAD industry. The original AutoCAD, which was the first widely adopted CAD application, was developed by Autodesk and first released in December 1982. Since then, AutoCAD has been updated and refined to the point that it now runs on a wide variety of computer systems, including desktops, laptops, and tablets. There are a number of different products, and we'll look at the most popular and most widely used today. For more details on the entire AutoCAD family, check out our dedicated AutoCAD page, which is full of guides, help files, and links to online articles. What Can AutoCAD Do? AutoCAD is an incredibly powerful CAD and drafting application, which lets you create and edit 3D models in different formats, including 2D drawings, 2.5D exploded views, 2.5D sections and parametric modeling, 3D models, animations, video, stereo-3D models, stereographic views, and more. You can either use AutoCAD to create your own design

Category:Computer-aided design software Category:AutoDesk Ladies and gentlemen, a round of applause for the newest member of the Michigan basketball family, former standout Caris LeVert. The Michigan alumnus, a highly touted high school recruit who was ranked 10th overall in the 2018 class by 247 Sports, spent time with both Michael and Spike this offseason. The 6-foot-4, 170-pound guard attended the 2017 U-M men's basketball team's annual golf tournament in Palm Beach, Fla., where he watched an alum-tastic performance from Michigan's Jared Sullinger. He's now back in town with the Michigan basketball program and is attending an event for Michigan players and fans with Spike Lee. "Spike Lee came through the city, showed up at the basketball school and he brought along a show, it was just amazing," LeVert told MichiganGymnastics.com on Monday. "It was really cool to see. We went outside and did a little Q&A. We talked to a couple of the guys about my high school career and just had a good time. We also went down to the court and had some fun just taking pictures with them." A native of Princeton, N.J., LeVert came to Ann Arbor in 2016 to be part of a transformative class that included future NBA players like Mo Wagner and Miles Bridges. LeVert averaged 9.2 points and 4.3 rebounds per game as a freshman and became the first freshman in school history to earn Big Ten Freshman of the Week honors. After sitting out the 2017-18 season, LeVert returned to the court last season and has shown why he was so highly regarded. He posted a career-high 11.6 points per game and also made 37.6 percent of his 3-pointers (18-of-46) during his sophomore campaign. He's been a crucial part of the Wolverines' success 5b5f913d15

NASA's Space Launch System, or SLS, is on track to be ready for a test flight in 2017. While NASA's Artemis program will eventually send humans to the moon, the SLS is actually intended to launch the first mission to Mars, named Mars 2020. Boeing is set to produce the rocket's first stage — which will carry the spacecraft to an altitude of roughly 63,000 miles — while Lockheed Martin will build the second stage. The rocket will reach speeds of around 5,000 mph during launch and release the spacecraft about 14 minutes later. According to NASA's website, the first SLS test flight will carry a payload into orbit and the second flight will blast a cargo ship toward the moon. Even though it's not on NASA's current schedule, the SLS could launch as early as 2021, according to a report in The Washington Post. In an interview, NASA Administrator Charles Bolden said the SLS is the agency's highest priority. "I think we have to have a vehicle that can take us to Mars," Bolden said. "I believe that we can do it. I'm reasonably confident we can do it within a defined set of capabilities with this vehicle."
