Enhanced Deployment Service Crack+ Free

- Automates deployment and optimization of Windows operating systems by allowing administrators to be highly efficient and effective in deploying Windows operating systems. - Provides the ability to perform a reverse deployment to restore an operating system to a previous state, including the state of any features, policies, and OS updates that were installed on the system before the deployment began. - Allows administrators to optimize operating systems for specific requirements by enabling the selection of one or more applications for deployment. - Provides administrators with advanced options for preparing a server for deployment. - Enables administrators to prepare the operating system for deployment by determining which Windows features, Windows updates, and applications to install on the system during the deployment process. During deployment, Microsoft recommends using the minimum set of features and updates to deploy Windows operating systems. The following are reasons why a few more features may be required: - Windows Update, Windows Security, and System Center are the three most frequently used features in deployments. - A limited set of features are preconfigured in the deployment images. - Application compatibility issues must be resolved before deployment begins. - It may be beneficial to deploy only a few applications at the same time. - An optional deployment of Windows 7 and Windows Server 2008 R2 may be required. Enhanced Deployment Service is supported only on Windows 7 and Windows Server 2008 R2. Features Enhanced Deployment Service consists of the following features: Note: In this table, the following attributes are shown in the same column.
