IFC Exporter For Revit [32/64bit]

By default, the IFC Exporter for Revit exports all elements in the model but only those that you have marked with the "Exclude in Exports" option. You can modify the following configurations for the IFC Exporter for Revit: - Exclude in Exports: Elements that you mark with this option will be exported to the drawing but will not be rendered. - Skip branches: By default, the branches are not exported. To export branches, you have to mark "Branch Layers" with "Export". - Export to PDF, EPS, RIB, and XPS: By default, only the PDF is exported. To export to the other formats, you have to mark "Export to PDF", "Export to EPS", "Export to RIB", and "Export to XPS" in the options. As you can see from the keymacro description, IFC Exporter for Revit is a useful plugin that you can use to create and export IFC drawings in a timely manner.
