Launch Autodesk Autocad, choose File-> New-> File, select keygen.exe and then click OK. After launching the application, you should see the message "Autocad 2009.ckey available to activate." Type the key to activate Autocad and you should be able to save, draw and create. The whole procedure can be accelerated by putting your file in an Autodesk Autocad repository. To do so, you should choose: File -> New -> New Repository... Select Autocad 2009.ckey keygen.exe and click OK. Q: Is there any way to push to a git repository from a different host? The remote host that I am working on my feature branches is down. I have a git repository in my local machine which I need to push to the remote host. What is the best way to do it without causing any problems? A: You have two options: Use the git protocol Push from your local machine. Using the git protocol, you can push using any SSH/https protocol client that supports "git push" on the command line. In this case, you will push to the git repository on your remote host using the same command as you would if you were pushing to a local git repository: git push The "--dry-run" option can be useful to see what the command would have actually run. If you do not have the git repository on the remote host, you can clone it, then push from that clone. Alternatively, you can push from your local machine directly to the remote git repository, as long as you are able to access the host. If you want to push a new branch, you can do: git push This will attempt to send the new branch, but will also update the remote HEAD if that is the current branch on the remote. Q: Find the source of a bash command line I have written a bash script, as a way of setting up a single linux command line. For instance the shell could be busybox, as: sudo busybox --link=/bin/sh,fs=ext3,loop=/dev/loop0 busybox --link=/bin/sh I don't need to
