download komik tiger wong teks indonesia. He is dedicated to the prosecution of the Buddhist and Hindu beliefs and teachings. new version of the Uyghur language from Uyghurstan. A certain percentage of Uyghurstan's regions are semi-autonomous entities and have their own chiefs. The Uyghur language is no longer used as a dialect of Chinese, and it has a dialect relationship with Tatar. Tibetan language and its border regions, such as Kashmir, Ladakh and Tibet, if not for historical reasons, are not autonomous, but still they constitute the Tibetan sections of the ethnic partition of China. In the 1960s, Uyghurstan became the home to Tatarstan and its successor states by the hand of the then Soviet Union. Following the establishment of independent Turkestan, only Tibet, Xinjiang and Kirghizstan remained to be members of the Uyghurstan group. In this paper, we introduce an issue of Uyghur scholars, what we also call Amdo Uighur, Uighurapapuan and the Uyghur-speaking population. Uyghur-language region, i.e. both Uyghurstan and Uighur-speaking areas. The Uyghur language is a Central Asiatic language that is closely related to Tibetan. Both Uyghurstan and Uighur-speaking regions are the home of the Uyghur ethnic group. The Uyghur language is spoken in the East Turkestan Uyghur Autonomous Region and a few kilometers of its southern areas.

11.1. Tibet

Tibet is a geographically, culturally, and linguistically distinct part of China. In 1954, Chinese authorities annexed the Tibetan areas of seven counties along the upper Amdo plateau and in western Qinghai. In 1965, they promulgated the Tibet Autonomous Region and began replacing Tibetan with the mother tongue of the settlers and their Lhasa-based court language, which is also called Tibetan. As a result, the official Tibetan language is today rarely if at all spoken in the region. Between 1963 and 1965, thousands of Tibetans who failed to resist were killed, which prompted an exodus of about half a million. The language is spoken in the Amdo (Amdo is a part of Tibet that used to be independent until 1950 and then annexed by China in 1951), Kham (part of Tibet which is mountainous south of the

Technical Field The present invention relates to a rotor driving apparatus and an electric rotating machine that rotate a rotor in a cavity formed in a housing. 2. Description of the Related Art An electric rotating machine has been known. The electric rotating machine is used in a motor vehicle, and includes a housing and a rotor fixed to a rotating shaft. A cavity formed in the housing is filled with cooling air. The rotor disposed in the cavity rotates in the housing. If the rotor is rotated at a high speed during operation of the electric rotating machine, air in the cavity is forced out from an outlet formed in the housing. If the rotor is rotated at a high speed, therefore, the forced air flows into the cavity, thereby reducing the amount of air that enters the cavity through the outlet. As a result, the amount of cooling air that is supplied to the cavity from a cooling air supply port formed in the housing is reduced. Consequently, the temperature of the electric rotating machine can be increased and the degree of temperature rise in the electric rotating machine can be suppressed. In some cases, however, the rotor disposed in the cavity may be driven at a high rotational speed during a cold start of the electric rotating machine. In such cases, the rotational speed of the rotor may exceed a predetermined threshold value. If the rotational speed of the rotor is increased in this way, an excessive amount of air is forced into the cavity as compared with the amount of cooling air that is required to be supplied to the cavity from the cooling air supply port. Consequently, the pressure of cooling air that is supplied to the cavity from the cooling air supply port may be increased, and the degree of temperature rise in the electric rotating machine can be increased. In order to suppress the degree of temperature rise in the electric rotating machine during a cold 3e33713323
