Learn more about Autodesk Exchange Apps Autodesk 360 allows users to publish their own AutoCAD extensions. Autodesk Exchange is another part of AutoCAD's online architecture, which allows you to publish your own AutoCAD extensions. Key concepts A drawing, called a drawing object, can be a picture or text in a page, the drawing object of the workbench or any other place. It is easy to add another drawing object to a drawing: simply move or copy another one into the desired position. However, it is not easy to add more objects to a drawing if the drawing already contains many objects. An object is the smallest component of a drawing. An object may be a single point, a line, a circle, a freeform curve, a spline, a text, a 3D model, or a collection of objects. Objects can be grouped into a drawing object. A command may be a single operation, or a sequence of operations. There are many types of commands, which can be as simple as moving or changing the color of a point or as complex as a dynamic block. Commands can be grouped together into commands sets. A drawing is made up of objects and commands. You may draw a single point or a multi-object drawing. A point, line or polyline can be filled with a color. A series of points can be connected by a line. You may place a text string anywhere on the drawing. You may place an elevation or section, or a 3D model in the drawing. The drawing is also made up of commands, grouped into command sets. Some commands are simple, some are complex. A plot, or plotter, is a device that may be connected to a computer to record drawing commands. The computer sends the plotter commands to draw a drawing and plot it onto a recordable surface. A plot may be a sheet of paper, a laser-engraving plotter or an inkjet plotter. An inkjet plotter is similar to a laser plotter in some ways, but an inkjet plotter can produce a range of output surfaces: paper, film, foil, and so on. The inkjet plotter uses an inkjet or bubble jet to directly "print" the drawing onto a recording surface. A drawing component may include a page, table, or drawing. A page is a separate piece of paper, with a drawing on it, and printed or stored in a r a1d647c40b
