Contents show] A A-Click A-Click is the preferred form of multi-touch input on mobile devices. It is available in Autodesk's Autodesk® AutoCAD® 2018, Autodesk® AutoCAD LT® 2018, Autodesk® Sketchbook Pro® 2018, Autodesk® 3ds Max® 2018, and Autodesk® Revit® 2018 software. A-Click was launched in 2017. It is an open technology with optional support from OpenUI; all that is required is the application that supports A-Click. A-Click is a form of multi-touch input for mobile devices, much like Apple's Mac OS X multi-touch gesture systems. As a standalone input option, it can be accessed through a software app's touch screen menus, or by a combination of touch screens and dedicated buttons. Support for A-Click is optional in AutoCAD LT and Autodesk Sketchbook Pro. A-Click is included in Autodesk 3ds Max and Revit, and is based on OpenUI technology. In Autodesk® Inventor® 2018, the default multi-touch input is still mouse input. The following table details support for A-Click by Autodesk software application. See also: B Blank slate drawing Some of the available features of AutoCAD include a blank slate drawing view. This view is designed for editing the entire drawing geometry without worrying about the drawing's geometry. The blank slate drawing view automatically recalculates the screen dimensions and redraws the screen at the size specified in the preferences. A default preference is to display the blank slate drawing view by pressing Ctrl+1. A blank slate drawing can be made using the following keyboard shortcuts: Table: General keyboard shortcuts for Blank Slate Drawing View Keyboard shortcut: Description CTRL+1 Press Ctrl+1 to display the blank slate drawing view. CTRL+2 Press Ctrl+2 to change the drawing scale to 100%. CTRL+3 Press Ctrl+3 to change the drawing scale to 50%. CTRL+4 Press Ctrl+4 to change the drawing scale to 20%. I have both System and the Dump so I can see what is happening. I am using the private class I created for all attributes with the interface of Attribute. I created an overloaded constructor that works the way I want. However when I try to load the XML file and then call the overloaded constructor I get the following error: Exception type:type of System.Xml.XmlException : Unexpected element Obviously it is looking for player_name and not the name I have for the attribute. This is the code I have SetAttributes(); public void SetAttributes() { Players = new Player[20]; Att = new Attribute[20]; } public override void Load(XmlReader reader) a1d647c40b
