What's New in the?

BoostSolutions Document Number Generator is a SharePoint add-on that is used to number/assign document numbers in SharePoint sites. Document Numbers are assigned to documents automatically, and a user does not have to manually enter these numbers. Document Numbers are assigned for each document as the document is created, or updated. The user can easily organize documents by Document Number. Document Numbers are generated for each document and for each file separately. Documents are numbered chronologically from 1 to x, and files are numbered chronologically from 1 to y. Document Number Generator does not limit document creation. Once a document is created and submitted, it becomes the highest document number. Therefore, users can always delete documents without worrying about existing document numbers. Document Number Generator can be used in all SharePoint document library types. Document Number Generator can be used with SharePoint 2010 and SharePoint 2007 document libraries. Document Number Generator uses a free license, and does not limit the number of users or amount of documents. Document Number Generator is a fast and effective solution to document management. Requirements: Install the Product, make sure the Product Key is activated. Installation notes Installing from the Retail Installer Launch the CD key or the URL to the web site on which the new Product is installed. Click on the Select Key Code option. The product key is entered. Click on the Install button. Installing from the Click Once Installer Click on the Select Key Code option. The product key is entered. Click on the Install button. Check the "Launch a Setup Wizard when a user runs the ClickOnce application" option. Click on the Finish button. Add a Reference to the Component A new project must be created. In the Solution Explorer, expand the bin folder, and then add a reference to BoostSolutions.DocumentNumberGenerator.dll. The Build action for the reference is set to Content. Document Number Generator Configuration and Administration A new project must be created. In the Solution Explorer, expand the new project, and then add a reference to BoostSolutions.DotNetWeaver.dll. The Build action for the reference is set to Content. In the main properties page, select the DotNetWeaver page and then change the version number of the component to 3.2.0.0. Set the DotNetWeaver page Build action to Content. Afterwards, right click on the DotNetWeaver page, and select the properties option. Set the DotNetWeaver Property to Build Action to Content, BuildNumber to 1, and the Version to 3.2.0.0. In the web.config file for the new project, add the following XML code to the
