A way of file recover software is to use Recuva to scan your system and find files which your operating system is unable to locate. Just as it is for other third-party tools in this category, Recuva is free to try, but requires a paid version to use more extensively. If you are planning to learn how to recover deleted files, then you have probably come across Recuva. The tool is quite simple to use, since it allows you to select the volume on the hard disk where you have deleted files and it will start scanning for them, as long as they still exist. This means that you don't need to wait for it to load all of the programs and files of your system. The main interface is made up of two windows: the first one displays the previews of the files that will be found and the second one shows details about them. If you are a beginner, the first step to do is to select the drive or partition where you think you have deleted the file or files you want to recover. Then you will be able to see how the scan is progressing. The process is made in a way that will make it easier for a non-expert user to detect the location of the files to be recovered. The program is fast and does a good job when it comes to scanning the selected partition or volume. Once Recuva has completed the scan, you will be able to access the list of the found files. Recuva can even handle multiple partitions and files, depending on the amount of free space available. As a fully free application, Recuva does not require a registration or activation process, so you can test it out from the start. You can even learn how to recover your deleted files by going through its tutorial. After that, it will be up to you to select the file or files you want to recover, save them into a folder of your choice, and then start the program to retrieve your files. If your deleted file or files are not found, then you might need to try out another tool for this purpose. It will be good to note that Recuva works on Windows systems only. Pricing: Recuva is available for free, although there is a trial version which you can try before purchasing it. If there is a chance that there is sensitive or proprietary information on the hard disk that you want to keep secure, then you should buy a paid version of Recuva. It 09e8f5149f
