Tweet Archive Search.Q: Remove an item in List and a specific value in the index? Hello I am trying to remove a item in a List and a specific value in the index of that item. I have this code that just deletes the entire item but I need to delete specific values as well. foreach (var x in \_dictionary) { \_dictionary.Remove(x); \_dictionary.Insert(x.Index, x.Value); } A: Try the following, it might suit your purpose \_dictionary.Remove(x); \_dictionary.Insert(x.Index, x.Value); \_dictionary.TryGetValue(x.Index, out x.Value); //Use this to verify whether x is still in the list. Hope it works for you. Migratory advantage and performance: the limits of gene flow. Populations that are near or inbreeding with one another have the potential

to evolve adaptive differences through the process of gene flow. These differences in populations that are genetically close but geographically distant could be due to the effects of selection during the migration process or due to genetic drift during the nonmigration period. Traditionally, gene flow and selection have been investigated using numerical methods, and although the former has been the focus of the majority of studies, the latter has received limited attention. We examine the effects of selection during the migration period on the evolution of a phenotypic
