Footnotes 1. The more commonly used term is photography, but it's the same technique used in all forms of photography: digital, film, motion, video, and traditional. # Chapter 1 What Is Photoshop? When you think of an image-editing program, you often think of programs like Photoshop, Adobe Lightroom, or Corel PaintShop Pro (or PaintShop Pro, as it's commonly known). Photoshop is a powerful image-editing program and a popular entry-level choice for beginners. It has many features that complement photo editing, such as the ability to create visual effects with filters, layer masks, and the power of an extensive library of Photoshop actions, as well as a large content library for textures and other materials. With its powerful layers and many output options, it also enables designers to create digital graphics such as Web banners and mailings. * * * **ONLINE** www.triskelebooks.com/photoshopcs6 * * * # Preparing Files You don't need a lot of space to store a large library of file types. That's because Photoshop creates files in a standard format, JPG or TIFF (which both are the same, technically speaking), and stores metadata in the JPEG file along with the image data. You can create a folder that will contain the files you're interested in and organize your folders any way you choose. You'll find many online how-to guides that show you how to add files to a given folder. If you choose to store all your Photoshop files in a folder, you should check the naming convention that Photoshop uses for images. Figure 1.1 shows the default setting. If you use a letter for the filename (X, Y, etc.), you must use a lowercase letter in the folder name. You must use the same filename convention no matter what you're using Photoshop for—portrait, landscape, event, or product. **Figure 1.1** : Naming conventions * * * **ONLINE** www.triskelebooks.com/photoshopcs6 * * *

The first case of Ebola virus disease (EVD) outside of the African continent has resulted in the death of a Spanish national and at least three suspected cases of the disease. The virus that causes EVD was first discovered in 1976 in Africa and has only been reported four times since then outside of the African continent. Yesterday, two Spanish health officials were put in quarantine after the man who died on Friday had been in contact with two individuals who tested positive for the virus. The man had travelled to Spain from the city of Braga in Portugal, where there had been an outbreak. The two people from Spain who have tested positive for Ebola are in the city of Toledo in the western part of the country. The Spanish government's first case of Ebola An epidemiologist with the Miguel Servet University Hospital in the city of Zaragoza said the first case of Ebola occurred with the man who recently died. The man had spent five days with the two individuals who later tested positive for the disease, the epidemiologist, Jose Maria Garzon, told a news conference. "We have established that the patient was in the same compartment as the two other patients," Garzon said. "The two men travelled to Spain in Brussels and from there arrived in Madrid airport. In Madrid they stayed in the same place," he said. Garzon said the epidemiological situation was stable today, a day after the man died. On Saturday, the Spanish government announced it would institute 14 checkpoints to prevent possible victims of the disease from entering the country. However, the situation will not be as chaotic as one feared earlier this week when the number of suspected cases of the disease increased. The alert level was raised to 4 (yellow) from 3 (orange), signalling a greater risk of the disease spreading. As of yesterday, only two individuals, one of them a Spaniard, had been confirmed as having contracted the disease in Spain. In April, a Spanish national working in an Ebola treatment facility in Sierra Leone died of the disease. In the Spanish city of Toledo, there have been no cases of the disease confirmed so far, although on Saturday, a woman was taken to a local hospital after a general practitioner noticed that she was feverish. As for the two individuals who had been in the same compartment as the man who died, Garzon said that they had been attending the wedding of a relative of a man who has
