Because of the integration, you can easily share documents in whatever format without bloat and you can launch Suitcase Fusion from a designated shortcut on your desktop, a menu item or your Start menu. However, the most powerful feature is that the documents are portable across the network and can be downloaded, edited and saved on the fly. If youre working on several projects or have different teams on different projects, you can batch-sync files to the server, so all the versions of each file are synchronized in real-time. Suitcase Fusion can open files in a variety of formats including Excel and Office 365 products and work with OpenOffice.org Calc documents. It can even save files in Office formats, in new versions of Office, or in other suitcases to send files to other users or with Office cloud storage. The extensibility is extensive and includes support for several major imaging formats such as TIFF, JPEG, GIF and PNG. The tool comes bundled with hundreds of professional-quality fonts, including OpenType and TrueType fonts, as well as more than 600 symbol fonts, such as customizable fonts for use in e-mail, and graphical symbols that you can insert into existing text. Fonts can be sorted either by families or by typeface or style and can be found in both alphabetic or non-alphabetic order. The program provides a comprehensive list of the databases available and lets you change database settings to match your preferences. Suitcase Fusion also provides a quick and easy way to export a new database of fonts to the cloud. All the settings that you configure are stored locally so you can quickly reuse a specific configuration with other Suitcase Instances.
